

Fork Positioner for Forklift

Fork Positioner for Forklifts - The fork positioner is a hydraulic apparatus which could allow the individual driving to be able to work the lift truck without leaving the seat. They are constructed out of high quality materials and are designed to be able to endure the most difficult operations and work environments. Side shifting models have the added ability to be able to laterally position the arms or the entire load in order to facilitate much more accurate carrying and placement in a quicker and much more efficient method.

The only one of its kind blade pocket design could enable the individual operating it to be able to securely swing the unit's blades without any fear of destroying the positioning cylinders. This allows the operator the alternative to either perform independent or simultaneous blade movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into blade positioners on available units.
